### **Tidewater Export Opportunities for Bedrock Aggregate in Northern New Brunswick. Webb, T.C. (2006). 46 p.**

Millions of tonnes of accessible bedrock aggregate resources are situated very near to the modern, deep water, year-round Port of Belledune in northeastern New Brunswick. The Port is strategically situated on Canada's east coast near major aggregate markets in the United States and has the potential to become a major international supplier of high quality crushed stone and related construction products for the eastern seaboard of North America, the Gulf coast and elsewhere. Mafic volcanic and plutonic rocks in the Belledune area have served as proven sources of high quality aggregate that have satisfied local and regional demand for a variety of construction materials for nearly two decades. The Port has sufficient storage capacity and load-out capabilities to handle a wide range of ocean-going vessels. A supportive industrial infrastructure enhanced by a work force experienced in mining and related resource sectors is considered a valuable asset to the establishment of a successful aggregate export enterprise in northern New Brunswick.

**Price : \$10.00 (CD ROM)**
